Is Your Network Safe from Viruses and Hackers?

According to a recent research survey, cyber attacks have increased by almost 80 percent over the last two years!

Information Technology (IT) Security should be an ongoing and fundamental consideration in every aspect of your network infrastructure. Proper network configurations can go unnoticed to the untrained eye, which can result in multiple unknown "security vulnerabilities" or breaches in security. Professional security implementation requires a rigorous in-depth analysis with an overall solutions orientated strategy.

Sky Computer Services believes that affordable and effective network security solutions are possible to achieve through a highly skilled technology team. Initially, our specialized network security consultant will sit down with you to analyze your situation and create an outline for a strategic security solution. Our network security consultant will then present options and recommendations based upon your needs. Ultimately, our goal is to deliver to you the most value-based and cost-effective Network Security Consulting solutions possible.

Free On-site Security Assessment

Sky Computer Services is now offering new customers a free security assessment performed by a Microsoft Certified Engineer. The audit includes up to two Windows Server 2003 systems or Windows 2000 Servers. Our security Specialist will run auditing software and generate an audit report.
